

OMAIR HAMDALLA

SOFTWARE DEVELOPER

+90 538 096 27 09 | hamdallaomair@gmail.com | European Istanbul, Turkey | omairhamdalla.github.io/Portfolio

PROFILE

Enthusiastic and eager to learn. Fast and motivated always to create and explore with problem-solving skills. Good reader for the surroundings and help to create a friendly atmosphere and a good team member. Grew up in an Arab country and used English as my main language along with Arabic, elementary French, practical Turkish. Currently, Focusing on AI & ML in Python, Game development in Unity and Mobile app development with Flutter. With up to 7 years of learning experience in the industry, Gained high ability to learn new skills and adapt. As a general idea: **Programming Skills:** AI&ML, Python, Automation, C / C++, C#, Javascript, SQL, Java, Flutter(Dart), Html/Css, React Js. **Software Skills:** Unity, Blender, Wordpress, Android Studio, Figma, Adobe Photoshop, Adobe Illustrator, Microsoft Office.

EDUCATION

Ihsan International Schools - High school Diploma - 2020 / 2021

Accredited from a USA-based STEM system fully in English. Chose my extra elective courses to be AP Computer Science, Art, and AP Psychology.

Istanbul Aydın University - Bachelor Degree in Software Development - 2021 / 2025

Took major courses like: Data mining, Machine Learning, Natural Language Processing, Neural Networks, Artificial Intelligence, Game Development Engines (Unity & C#), Database management in SQL, Web Development, iOS App Development with React Native, Android App Development in Android Studio. Networks with Cisco, Cloud Computing Platforms, E-Commerce, Decision Support Systems, Business.

WORK EXPERIENCE

Graphic Designer - Freelance - 2017 / 2020

Took Photoshop course to learn graphical design and design basis then online Illustrator course. Designed some posters and flyers for various locals. Increased my knowledge more by learning Color Theory and designing characters digitally and sketching.

Web Designer - MevaSoft Ltd. - 2022 / 2023

Worked along a team to create websites using WordPress. Used multiple PHP codes and plugins to extend the functionalities. Learnt how to further enhance the website with responsiveness and add external codes with HTML/CSS.

AI Software Developer - Okatan Saglik Arge. - 2023 / 2024

Worked on AI-driven solutions for image generation and MRI analysis, leveraging deep learning techniques. Computer vision. Gained hands-on experience in model development, data preprocessing, and optimization. Contributed to real-world AI applications and engaged in R&D, improving automation and diagnostic precision.

IT Support Technician - Istanbul Aydın University - 2024 / 2025

Provided technical and administrative support for online courses. Assisting lecturers on digital platforms to ensure courses were delivered smoothly. Managed hardware, software, and network troubleshooting while optimising system performance. Assisted in maintaining digital learning for my university's online teaching platform.

PROJECT EXPERIENCE

Heart Disease Exploratory Data Analysis & Prediction - Language design & implementation course

Cleaned and preprocessed a heart disease dataset, performed EDA to check heatmap and identify patterns, and built a ML model to be able to make prediction. Gaining 85% F1 score accuracy. Used 12 features to predict heart disease outcomes.

Automation Assistant - Programming with Python course

Developed a persistent Python GUI assistant with features like: OCR for text detection and clipboard integration, prayer times displayer using web-scraping, and a Pomodoro timer for productivity. Additional features are in progress as well.

Automated Scraping - Freelance

Created a tool using Selenium Python and Microsoft Workflow, To login into a website, Collect info (Web-Scrape) of more than 8k links, Then scrape each link's page individually, Organise it in an Excel sheet using Pandas to prepare for delivery.

Basic Voice Assistant - Artificial Intelligence course

Simple tasks being executed using voice commands, used NLP features in NLTK like Intent Classification, Executing IoT functions via Yeelight bulb and controlling Spotify player via API, Controlling small computer functions as well.

Maze game generator and solver - Data Structures in Js course

Generates a maze by Javascript using Depth-first search to be played by the user in a web GUI using Html/Css, and solving buttons that showcases effective use of recursive backtracking.

Data augmentation on Fake news & Prediction - Neural Networks course

Applied methods of Easy Data Augmentation on Fake news to create different NLP models using BiLSTM to detect and predict Fake and Real News, then compared these models. Used methods such as Random Insertion, Random Deletion, Random Swap, and Back-Translation to create different model for each.

First Person Shooter Game - Personal development

Created a basic FPS game in Unity3D, Creating C# scripts and adding 3D models to the game. Added various features like generating enemies, counting score and adding a health system with GUI.

Assistive PC control for the disabled - TÜBİTAK & Graduation Project (Pending)

TÜBİTAK 2209-A, Research Project Support Programme for Students. Aim of the project is to help the disabled use and interact with computers with more ease and accessibility. Control would be by using: Face Gestures, Eye movement, Voice commands. By using C# & Python scripts and with the approval of the organisation, this project will be carried out.

VOLUNTEER

Winter Camp Volunteer - At Ihsan International Schools, I helped the staff organise, prepare and manage activities.

Google Developers Group Core Team - At IAU, Participated in preparing events and making content and designs.
